Fictional Sample Medical Report - For Software Testing Only

Report Type	Knee Injury Follow-Up Evaluation	Report ID	ORTH-KNEE-2026-0046
Date of Examination	2026-07-12	Examining Physician	Dr. Sameer Kulkarni, MS Orthopedics
Referring Physician	Dr. Kavya Rao	Facility	CarePlus Orthopedic Center
Patient Name	Arjun Mehta	Patient ID	CP-PT-10482
Age / Gender	32 / Male	Affected Joint	Right Knee

CHIEF COMPLAINT

Patient presents for follow-up evaluation of right knee ligament injury. Patient reports improvement in pain and swelling after physiotherapy.

HISTORY OF PRESENT ILLNESS

The patient has completed 8 weeks of conservative management including bracing, activity restriction, and supervised physiotherapy. He reports reduced pain while walking and improved knee movement. Mild discomfort persists during deep squatting and prolonged stair climbing.

INJURY DETAILS

Previous Injury Type: Partial ACL sprain with Grade I MCL sprain

Original Date of Injury: 2026-04-07

Pain Score: 3/10

Swelling Grade: Mild

Weight Bearing: Full weight bearing with mild discomfort

Range of Motion: 0 degrees to 130 degrees

Knee Flexion: Improved

Knee Extension: Full and painless

PHYSICAL EXAMINATION

Inspection: Mild residual swelling around knee joint

Tenderness: Minimal medial joint line tenderness

Lachman Test: Negative to mildly positive

Anterior Drawer Test: No significant laxity

McMurray Test: Negative

Varus Stress Test: Negative

Valgus Stress Test: Negative

Patellar Tracking: Normal

Neurovascular Status: Intact

VITAL SIGNS

Blood Pressure: 122/80 mmHg

Heart Rate: 74 bpm

Temperature: 98.2 F

SpO2: 99%

FOLLOW-UP MRI RIGHT KNEE FINDINGS

1. Healing partial sprain of anterior cruciate ligament.
2. Medial collateral ligament sprain shows interval improvement.
3. Joint effusion significantly reduced.
4. No new meniscal tear detected.
5. No fracture or bone marrow edema.

6. Articular cartilage remains preserved.

MEASURED VALUES

Joint Effusion: 6 ml estimated
ACL Fiber Disruption: Approximately 8%
MCL Sprain Grade: Resolving Grade I
Medial Joint Space: 4.9 mm
Lateral Joint Space: 5.2 mm
Quadriceps Strength: 5/5
Hamstring Strength: 5/5
Knee Stability Score: 86/100
Functional Mobility Score: 82/100

COMPARISON WITH PREVIOUS REPORT DATED 2026-04-10

Pain score improved from 7/10 to 3/10.
Range of motion improved from 0 degrees-95 degrees to 0 degrees-130 degrees.
Joint effusion reduced from 18 ml to 6 ml.
ACL fiber disruption improved from 20% to 8%.
Quadriceps strength improved from 4/5 to 5/5.
Hamstring strength improved from 4/5 to 5/5.
Knee stability score improved from 68/100 to 86/100.
Functional mobility score improved from 55/100 to 82/100.
Medial joint line tenderness reduced.
McMurray test changed from painful click suspected to negative.
Weight bearing improved from partial to full.

DIAGNOSIS

Healing right knee partial ACL sprain with resolving Grade I MCL sprain. Significant clinical and functional improvement noted.

TREATMENT PLAN

1. Continue physiotherapy for 4 more weeks.
2. Begin gradual strengthening and balance training.
3. Avoid competitive sports for another 4 to 6 weeks.
4. Light jogging may be started only after physician clearance.
5. Continue home exercise program.
6. Follow-up if pain, swelling, or instability returns.

MEDICATIONS

No regular pain medication required.
Use topical anti-inflammatory gel only if pain occurs after exercise.

RECOMMENDATION

Patient shows good recovery with conservative management. Gradual return to activity is advised. Patient should avoid sudden twisting movements until full sports clearance.
