Fictional Sample Medical Report - For Software Testing Only

Report Type	Knee Injury Evaluation	Report ID	ORTH-KNEE-2026-0018
Date of Examination	2026-04-10	Examining Physician	Dr. Sameer Kulkarni, MS Orthopedics
Referring Physician	Dr. Kavya Rao	Facility	CarePlus Orthopedic Center
Patient Name	Arjun Mehta	Patient ID	CP-PT-10482
Age / Gender	32 / Male	Affected Joint	Right Knee

CHIEF COMPLAINT

Patient reports pain and swelling in the right knee after twisting injury while playing badminton 3 days ago.

HISTORY OF PRESENT ILLNESS

The patient experienced sudden twisting of the right knee during lateral movement. He reports immediate pain, mild swelling, and difficulty walking. No prior history of knee surgery. Pain increases while climbing stairs and squatting.

INJURY DETAILS

Injury Type: Suspected ligament sprain
Date of Injury: 2026-04-07
Pain Score: 7/10
Swelling Grade: Moderate
Weight Bearing: Partial weight bearing with discomfort
Range of Motion: 0 degrees to 95 degrees
Knee Flexion: Limited due to pain
Knee Extension: Full but painful at terminal extension

PHYSICAL EXAMINATION

Inspection: Moderate swelling around anterior knee
Tenderness: Medial joint line tenderness present
Lachman Test: Mildly positive
Anterior Drawer Test: Mild laxity noted
McMurray Test: Painful click suspected
Varus Stress Test: Negative
Valgus Stress Test: Mild discomfort
Patellar Tracking: Normal
Neurovascular Status: Intact

VITAL SIGNS

Blood Pressure: 124/82 mmHg
Heart Rate: 78 bpm
Temperature: 98.4 F
SpO2: 98%

IMAGING

X-Ray Right Knee AP/Lateral View: No fracture or dislocation seen. Joint alignment maintained. Mild soft tissue swelling noted.

MRI Right Knee Findings:

- Mild partial sprain of the anterior cruciate ligament.
- Grade I medial collateral ligament sprain.
- Mild joint effusion.
- No complete ligament tear.

5. Mild signal change in posterior horn of medial meniscus, no definite tear.
6. Articular cartilage preserved.

MEASURED VALUES

Joint Effusion: 18 ml estimated
ACL Fiber Disruption: Approximately 20%
MCL Sprain Grade: Grade I
Medial Joint Space: 4.8 mm
Lateral Joint Space: 5.1 mm
Quadriceps Strength: 4/5
Hamstring Strength: 4/5
Knee Stability Score: 68/100
Functional Mobility Score: 55/100

DIAGNOSIS

Right knee partial ACL sprain with Grade I MCL sprain and mild joint effusion.

TREATMENT PLAN

1. Rest, ice compression, and elevation for 7 days.
2. Hinged knee brace advised for 3 weeks.
3. Avoid running, jumping, squatting, and sports activity.
4. NSAID medication for pain and inflammation as prescribed.
5. Physiotherapy advised after acute swelling reduces.
6. Follow-up after 6 to 8 weeks or earlier if pain worsens.

MEDICATIONS

Tablet Ibuprofen 400 mg twice daily after food for 5 days.
Topical anti-inflammatory gel twice daily for 7 days.

RECOMMENDATION

Patient is advised restricted activity and partial weight bearing. Physiotherapy to focus on swelling control, range of motion, and gradual strengthening.
